SUMMARY

Backend engineer with 10+ years building payment and transaction-processing systems. Led the architecture and delivery of a platform handling **500k+ transactions daily**, including integrations with **Western Union** and **KYC/document-verification** flows. Deep experience with Node.js, NestJS, and PostgreSQL under real financial-grade reliability and throughput requirements.

CORE SKILLS

Payments & Compliance: Transaction processing, KYC/document verification, third-party financial API integrations (Western Union)

Backend: Node.js, NestJS, Spring Boot, REST/GraphQL APIs, OAuth2, JWT

Data: PostgreSQL, MongoDB, CouchDB, MySQL — schema design and query optimization

Infrastructure: Docker, GitHub Actions CI/CD, AWS, DigitalOcean

Frontend (supporting): Angular, React

EXPERIENCE

ITTI S.A.E.C.A — Full-Stack Engineer & Tech Lead
Asunción, Paraguay | 2020 – Present

- Owned architecture and delivery of a payment platform processing 500k+ transactions daily, the company's highest-throughput production system
- Built and maintained integrations with Western Union APIs, enabling new revenue streams for the platform
- Implemented document verification and KYC data validation for Western Union operations, directly supporting regulatory compliance
- Developed backend services with NestJS covering user registration and end-to-end payment flows
- Designed scalable backend architecture on Node.js + PostgreSQL; improved system performance by 30% through query optimization and architectural changes
- Implemented CI/CD pipelines with Docker and GitHub Actions to support safe, frequent releases on a financial system
- Led technical decisions, code reviews, and cross-team coordination as tech lead

V Informática — Full-Stack Developer (Remote)
Zürich, Switzerland | 2017 – 2020

- Developed an event platform handling 10k+ annual registrations, improving booking efficiency by 20%
- Integrated third-party APIs via REST and FTP; automated backend processes with cron jobs

National Computing Center — Software Developer
Paraguay | 2018 – 2019

- Built a student registration system supporting 5,000+ users per exam period
- Optimized backend performance to handle 200+ queries/sec
- Redesigned the frontend in Angular to improve usability

Ipositivo — Web Developer
Paraguay | 2015 – 2017

- Developed and maintained client websites using Node.js, PHP, JavaScript, and MySQL
- Managed hosting infrastructure and deployments
