Key Skills

- **Front-End:** Angular 2+, React, HTML, CSS, Bootstrap
- **Back-End:** Node.js, Express, Sequelize, PostgreSQL, PHP
- **Tools:** Docker, CI/CD (GitHub Actions), CouchDB
- **Cloud Platforms:** AWS, Digital Ocean

About Me

With over 5 years of professional experience, I have played a key role in designing, developing, and enhancing modern web applications and RESTful API systems.

- **Front-End:** Specialized in Angular, React, HTML, jQuery, and CSS. Migrated SPAs to PWAs for automatic updates and implemented advanced CI/CD practices.
- **Back-End:** Extensive experience with Node.js, Express, Sequelize, PostgreSQL, and PHP, focusing on secure and efficient RESTful APIs.
- **Strengths:** Designing generic modules, maintaining secure environments, and adapting quickly to changing requirements.

I am committed to technical excellence and continuous improvement, always seeking innovative solutions for teams and projects.

Work Experience

IITI S.A.E.C.A (2020 - 2024 | Asuncion, Paraguay)

Front-End (Angular 2+, Docker):

- Led full development lifecycle of a modern web application using Angular Material, Bootstrap, and Reactive Forms.
- Migrated project to a Progressive Web App (PWA) for automatic updates.
- Implemented CI/CD pipelines with Docker and GitHub Actions.
- Designed reusable modules for form development.
- Upgraded admin dashboard based on Figma designs.
- Developed interceptors for error handling and robust authentication (OAuth 2.0).

Back-End (Node.js, Express, Sequelize, PostgreSQL, Docker):

- Developed and maintained a payment management system processing 250,000+ transactions daily, including Western Union payments.
- Built APIs to integrate Western Union services, expanding operational reach and enabling ITTI to become a Western Union Master Agency.
- Configured Docker and GitHub Actions for CI/CD.
- Implemented CouchDB for system logging and monitoring.
- Enhanced login security with OAuth 2.0 and JWT tokens.
- Migrated the Wepa app backend to Next.js, improving performance and scalability by 30%.

Additional Responsibilities:

- Architectural and design decisions for new features.
- Code reviews for quality and best practices.
- Coordination with cross-functional teams for API integration and compliance.

V Informatica (2017 - 2020 | Zürich, Switzerland)

Remote (Full-time/Part-time): PHP, Apache, MySQL, HTML, CSS, jQuery

- Designed and developed kirche-zh portal, handling 10,000+ event registrations annually and improving booking efficiency by 20%.
- Maintained DynPG CMS portal.
- Created cron jobs for event logging and integrated third-party APIs via FTP and REST.
- Ensured seamless user experience with accurate event information.

National Computing Center - Universidad Nacional Asuncion (2018 - 2019 | Asuncion, Paraguay)

- Developed a student registration system for the Faculty of Engineering, managing 5,000+ active users per exam period.
- Redesigned web interface with Angular 2+ for improved usability.
- Optimized backend with Spring Boot, PostgreSQL, and GlassFish to handle 200+ queries/sec.
- Maintained system with new features and up-to-date packages.

Ipostivo (2015 - 2017 | Asuncion, Paraguay)

Remote (Full-time/Part-time): Node.js, Sequelize, PHP, MySQL, HTML, CSS, jQuery

- Designed and developed multiple websites for clients and company.
- Managed hosting servers for clients and company.

Education

National University of Asuncion - Polytechnic Faculty
Computer Engineering | 2006-2014

- Strong foundation in engineering and computer science: programming, algorithms, data structures, computational logic, and relational databases.
- Elective courses in security, front-end/back-end development, and cloud computing.
- Practical application of skills in real-world projects.
